15th Annual **SERGS** MEETING

8th - 10th
JUNE 2023,
ATHENS, GREECE

SAVE THE DATE

Society of European Robotic
Gynaecological Surgery

Dear colleagues,

“Καλώς ήρθατε στην Αθήνα!” (a traditional Greek welcome wish)

We are delighted to invite you to the **15th Annual SERGS Meeting** that will be held in Eugenides Foundation Planetarium, in **Athens** between the **8th and 10th June 2023**.

Eugenides Institution or Athens Planetarium (National Observatory of Athens) is a research institute founded in 1842 and one of the oldest research institutes in Southern Europe.

It consists of a central 278-seat Amphitheatre with an enormous spherical dome for digital 3D projections and peripheral conference rooms suitable for high-standard venues and suitable to welcome international conferences.

We expect academic speakers, top experts in the field of robotic gynaecological surgery, gynecologists, as well as fellows, students and nurses from all over Europe and overseas.

The scientific program includes round table interactive discussions on a variety of topics; demonstration of robotic surgeries, definition of anatomic pathways, medical innovations, new robotic systems, and updates in the field of robotic surgery with focus on artificial intelligence and real-time augmented reality software. The conference will also host a training session for the certification program, alongside the awards for the best selected oral presentations and videos.

Athens is the capital of Greece and is widely referred as the birthplace of democracy, arts and philosophy. The home of Plato's Academy and Aristotle's Lyceum is in modern times a large cosmopolitan metropolis with vivid industrial, political, maritime and cultural activity.

The city of Athens, the Eugenides Foundation, and the family of SERGS is looking forward to welcoming you all!

Dr. Vasiliki Chatzirafail
SERGS 2023 Co-Chair

Dr. Alik Tserkezoglou
SERGS 2023 Co-Chair

Thomas Ind
SERGS president
